3568017 - Guidelines for SAP Business Data Cloud (BDC) Cases

Component: BDC-CPT (Business Data Cloud > BDC Cockpit), Version: 16, Released On: 13.04.2026

Symptom

Common Questions

- What information is required when opening an SAP Business Data Cloud (BDC) support case? What should I include in a support case to avoid delays and speed up resolution?
- What cases fall under SAP Technical Support cases (errors, documentation issues, operational requests)?
- Where can I get help with consulting or "how-to" questions?
- For missing features and functionality, create an BDC Enhancement Request in the Influence Portal or check the SAP Road Map Explorer for upcoming features!
- What troubleshooting steps can I take to assist with diagnosing issues?

Consulting or "How-To" Issue

- SAP Technical Support focuses on fixing **errors** or **problems** with standard SAP software. It does **not** include advice on system setup, configuration, or general "how-to" questions. For these:
  - Visit the SAP Community: Business Data Cloud for these tips and advice.
  - Refer to SAP Note 2706322 for SAP Support versus consulting guidelines.
  - Check KBA 3509202 for examples of supported and consulting topics.

System Availability

- Check the availability of SAP Business Data Cloud in Cloud Service on the SAP Trust Center
- Check the status of cloud products in SAP CAC (SAP Cloud Availability Center)

Environment

SAP Business Data Cloud

SAP Business Data Cloud Connect

SAP Datasphere

SAP Analytics Cloud

SAP Databricks

People Intelligence

Resolution

✨ **Make sure to follow the guidelines to optimize the processing of the case.**

Case Creation in the SAP4ME Get Support App:

1. Basic Information

Make sure to choose the right **System**, **Product** and **Product Function** for your case.

- System: search with "Business Data Cloud" and pick the correct tenant as per **system name**.

- Product: choose "Business Data Cloud".
- Product Function: refer 👉 product function to choose the suitable one.
- Business Impact: Refer SAP Note 67739 - Priority of problem cases

(In case of SAP Datasphere, SAP Analytics Cloud or SAP Databricks issues, select the respective Related Products).

Alternatively, the SAP Datasphere, SAP Analytics Cloud or SAP Databricks tenants can also be selected directly in System, then guidance for the respective systems should be followed:

- System: search with 'SAP Datasphere'
  - Common SAP Datasphere issues - not specific to Business Data Cloud - could be logged in the classic DS-xxx components as described in KBA 2854764.
- System: search with 'SAP Analytics Cloud'
  - Common SAP Analytics Cloud issues - not specific to Business Data Cloud - could be logged in the classic LOD-ANA-xxx components as described in KBA 2487011.
- System: search with 'SAP Databricks'
  - Common SAP Databricks specific issues - not related to Business Data Cloud Cockpit - could be logged directly in BDC-DBX

2. Detailed Information

Please answer all the questions that popped up. This is very important to collect enough information for analysis.

- Answer all the questions that popped up:
  - Support User: Enable Support User Creation.
    - For BDC Cockpit: See KBA 3568907.
    - For a Datasphere Tenant: See KBA 2891554.
    - For an SAC Tenant: See KBA 3200458.
  - Issued objects or screen: ***Paste the direct URL if possible!***
- Detailed Description:
  - Describe in detail what the behavior of the System is. Describe in a few sentences what is happening. What did you expect and what happened instead? Please be as detailed as possible.
    - Example: I log into Business Data Cloud cockpit, try to activate a data package, select xxxx package, press the 'activate' button, there is an error "abc" pops up.
- Steps to Reproduce:
  - Select the **checkbox** if you allow SAP to reproduce the symptom in your non-production tenant. This will help to expediate the case processing.
  - Provide step-by-step description including navigation and expected results / actual result, flows, which actions taken to reproduce the error, problem, issue, or behavior.
- Date or Date Range when the issue occurred:
  - For one time or intermittent issues specify the most recent start and end dates.
    For presently occurring issues, only specify the start date/time. Accurate timing can expedite the issue resolution.

3. Attachment

- **Quick video** or **"Step by step" document** describing the issue.
- **Note**: If possible, it's better to add specific text, keywords, and error messages into the case text as opposed to attaching the information into a file. This helps our machine learning algorithms. See Incident Solution Matching.

4. Contacts:

- **Time zone**: If you would like to speak to an engineer who works in the same time zone. Make sure your S-User information is up to date.
- **Phone**: We cannot contact you if your details are outdated. Easy to fix if you review KBA 1271545.

If Product Functions not available/selectable, review your system selection or chose a component directly as described in KBA 1296527:

- BDC-CPT (SAP Business Data Cloud cockpit)
- BDC-PROV, BDC-PROV-BDCC, BDC-PROV-DSP, BDC-PROV-SAC, BDC-DSP-UCL (Provisioning, Formation)
- BDC-DPI-S4 (Issues with Intelligent Applications, Data Packages or Data Products)
- BDC-DSP (Issues regarding SAP Datasphere Data Integration or Catalog)
  - Common SAP Datasphere issues should be logged in the classic DS-xxx components as described in KBA 2854764.
- BDC-SAC (Issues with Intelligent App Onboarding or Customization)
  - Common SAP Analytics Cloud issues should be logged in the classic LOD-ANA-xxx components as described in KBA 2487011.
- BDC-BW (Issues with the Data Product Generator in BW PCE)
- BDC-DBX (Issues with SAP Databricks Integration and Provisioning in BDC)
- BDC-CON (Issues with SAP Business Data Cloud Connect - Provisioning and Sharing Data Product with SAP BDC Connect)
- XX-SER-FORME (Issues with visibility of the Business Data Cloud Tile in SAP4ME)
