SAP Knowledge Base Article

3605796 - Provisioning of SAP Analytic Cloud (SAC) tenant within the Business Data Cloud (BDC) setup in SAP for Me is not completing

Component: BDC-PROV-BDCC (Business Data Cloud > Landing component for BDC Provisioning (DSP, SAC, BDC) > BDC Cockpit Provisioning), Version: 3, Released On: 28.01.2026

Symptom

It is stuck at the "Processing" status when trying to provision an SAC tenant under Business Data Cloud setup.

Environment

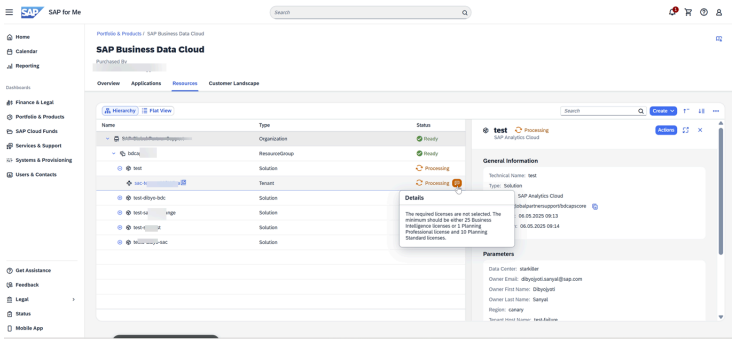
- SAP Business Data Cloud
- SAP Analytic Cloud

Reproducing the Issue

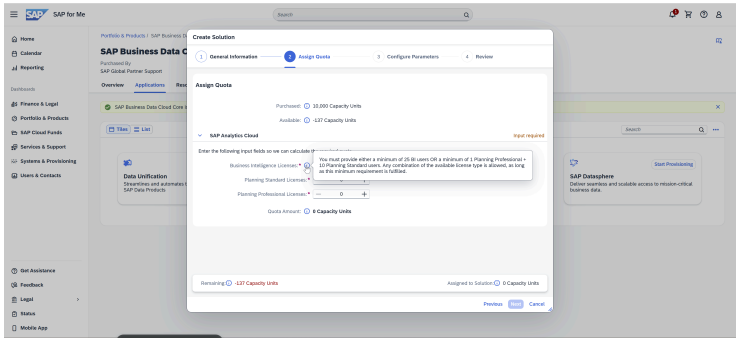
1. Follow the help guide to Provisioning SAP Business Data Cloud Applications
2. It is stuck at "Processing" status when trying to provision an SAC tenant

Cause

- The required licenses are not selected.
- There will be an error status and the error message, as shown below if the required licenses are not selected.



- According to the help guide here: In the Production environment, you must provide either a minimum of 25 BI users OR a minimum of 1 Planning Professional + 10 Planning Standard users. As long as this minimum requirement is fulfilled, any combination of the available license types is allowed.
- There will be an **i** button with note indicating the required licenses, as shown below.



Resolution

- Trigger the deletion of the instance that is stuck from the **Action** button and create a new SAC tenant with the minimum licenses.
- Note for the newly created tenant: Do not use the same host name for the instances.
- Internally, when an instance is deleted, it remains suspended for one week before the data is fully deleted. This is to prevent cases where customers have accidentally deleted an instance and need it restored. However, you cannot have two instances with the same host name. Therefore, if you attempt to create new instances using the same host name as the recently deleted instances, their creation will either fail or get stuck as well.
